To

Who it may concern.

I am a resident from Kemps Creek I have been living here for 27yrs in that 27yrs it has never flooded as now our land has been classed as flood plains. We were told our land was one in one hundred flood but we have just learnt with maps the government provided it is now High, Med and Low flood lines and was changed without consulting us in 2012 and I believe it was done only to benefit the Aerropolis Core.

As this is causing stress and anxiety, we would like you to question the government as the meeting that was held for the residents was vague and dishonest, as N.S.W. planning have not been forth coming with all the details with zoning Non-Urban on the basis of an environmental report that is not finished or available and no one has seen.

Could this be a sophisticated plan to obtain value capture to pay for the

infrastructure needed for the airport?
to get us out cheaply as possible
and then come back and rezone for
the developers, so they can have multi
storey apartments minutes away from
a 24hr airport. Many of the residents
have now consulted environmental
lawyer and we are looking to do a
class action suit if the government
proceeds as we only see these
changes to benefit NSW government
at the sacrifice of the residents.
We are begging all media to bring
this to light so we can have an
enquiry as to how and why they can
just turn peoples financial positions
upside down. If the government
needs this green space land for the
development to proceed we must
be compensated at the same
market value as the blue and yellow
stripe area which will be developed
into high rises and other development.
All we ask is to be compensated
fairly.

Thankyou.

Frances Oliva
