Submission: This is not a conservation strategy_ it is about creating parkland. We need more wild places, with the aim of conservation of plants (native trees, native grasses, native shrubs etc) the conservation of animals (native birds, native mammals, native reptiles etc) the conservation of water (existing streams, ponds, underground flows etc) and the conservation of land (existing land - not removing vegetation and water sources and putting pathways and sports facilities on it). Human beings have the arrogance to think we are the only creatures using the earth. We need to consider all the insects who will die, from spraying weeds and bindiis so humans can walk on the grass. Insects need plants, plants need insects, birds eat insects and plants, animals need a place to live. And humans need all of these things - we are interdependent beings, not just sports players and watchers. We need more than a path to walk on, we need to know we can leave a little bit to other creatures, and for once, be less greedy.
