Submission

I write to express concern over f the EIE for the Design & Place SEPP, Feb 2021., Part 3.1.1 Design Skills. I want to begin by acknowledging how heartening it is to see the strong Principles guiding this SEPP, including an emphasis on engagement with indigenous communities, environmental sustainability, and social diversity, health & connectivity. However, it is distressing to see the first policy assumption on how to achieve this: a swift amputation of the vast majority of practicing building designers from the process. Surely it makes better sense to support and enforce more rigorous qualification and registration requirements for Building Designers, in addition to the proposed Approach, Evaluation & Review process in this SEPP. The Building Designers Association of Australia has been enacting such changes to registration requirements very recently with much support from within our profession. Many members have years of experience and specialist knowledge in the areas in which these changes will prohibit them from performing. Thank you

I agree to the above statement
Yes
