To whom it may concern,

According to the latest maps regarding the development of the Aerotropolis, there is to be a drainage basin placed at the front of our land by the Water Board. This drainage basin is redundant due to the changes to the land that come with development. This drainage basin has never been necessary in the time that we have owned the property, and nothing will change that in the future. If this drainage is needed it can be easily achieved using pipes underground. Therefore, I do not want this basin on my land.

In addition, the maps also show a large area of parklands in the front half of our property, although our land has been zoned as mixed use and not environmental (non-urban land). Hence, this area is not a necessity. I believe this parkland should be minimised and contained to the properties closer to the creek. However, if this area must be a part of our property, I would like it to be shrunk to the smallest area necessary, while also increasing the number of levels a development can have on the rest of our property. By raising this to twenty stories, this would balance the loss of value of our property. Not only is this loss of value stressful to our family, but it also greatly disadvantages our family's future.
